

Workday Financial Management for higher education.

Higher education finance departments face mounting pressure to spend less time managing transactions and more time supporting strategic decision-making. However, most colleges and universities are faced with having to depend on outmoded technology for their finance and accounting needs. Existing on-premise software can't solve the challenges of today's education institutions.

To address this issue, Workday started from a clean sheet of paper to reinvent the solution to financial management. Workday delivers a single system to support data management, automation across core financial business processes, multidimensional reporting, and compliance—all with a consistent user experience accessible from desktop or mobile devices. It uses an in-memory object architecture with AI built into the core to support the unique needs of colleges and universities—today and into the future.

Workday is the only cloud solution built on an adaptable architecture that empowers finance to address changing business needs quickly and securely with flexible finance and accounting processes. Finance can pivot organizational structures and add new requirements, sometimes within minutes instead of weeks or months as with other systems. And Workday does this while providing always-on internal control and auditability, documenting the who, what, and when as you go.

Streamline operations.

New technologies, including AI, introduce new opportunities for efficiency, where the finance office gains time through automation to focus on strategic initiatives and areas of the institution that need attention. AI interrogates data to continuously search for anomalies and make recommendations. This helps finance usher in a new era of efficiency, making processes frictionless and intelligent.

Simplify beyond the general ledger.

Significantly streamline your chart of accounts for a faster, more accurate financial close. By capturing and storing richly described business events, Workday Financial Management delivers the capabilities of a traditional general ledger without the limitations of a rigid code-block structure.

Workday can model multiple legal entities or business units to easily complete transactions within the organization. It seamlessly handles other key capabilities such as allocations, journal processing, budgets, and consolidations.

Key Benefits

- Drive real-time insight with continuous accounting
- Gain a more complete and accurate picture of your business, fast
- Equip your team with relevant, contextual financial insights available on the device of their choice
- Provide best-in-class and always-on audit capabilities
- Embrace operational and reporting changes without disrupting business processes
- Provide all users with a consistent and easy-to-use interface

Key Features

- General Ledger
- Grants Management
- Budgetary Control and Commitment Accounting
- Procurement
- Expenses
- Fund Accounting
- Endowment Accounting
- Accounts Payable
- Accounts Receivable
- Asset Management
- Projects
- Financial Reporting
- Financial Close
- Cash Management
- Financial Planning
- Audit and Controls

Empower your people with proven technology.

Workday helps you transform your finances to drive down costs and adapt quickly to change. Created with input from strategic design partners in higher education, Workday Financial Management provides industry-specific functionality that is seamlessly unified with the Workday suite of enterprise cloud applications. It lets you plan, execute, and analyze in a single system, providing more consistency and greater visibility than with other systems.

The intuitive user interface in Workday enables business users and finance professionals to navigate the application with minimal training. Executives and managers also benefit from the Workday experience with easy access to information that impacts their day-to-day decisions.

Grants management.

Workday can handle a wide range of grant administration requirements, such as automatically capturing direct costs, calculating facilities and administration costs, recording revenue, enforcing spend compliance, collection through letter of credit draws, and billing. Reminders and scheduled tasks help you manage the entire lifecycle, from pre-award spending to award close-out.

Budgetary control and commitment accounting.

Workday Financial Management provides a flexible budgetary control framework that is available throughout the procurement cycle and for all major staffing activities. Users can decide whether to enforce hard stops or warnings, or to just use the budgets for reporting. Visibility into available funds improves compliance and reduces errors for a marked decrease in budget overruns.

Procurement.

Workday provides an end-to-end solution for managing all aspects of the materials management process for goods and services within your institution. It handles the reconciliation of purchases made with P-cards, and provides flexibility for storing, tracking, and replenishing inventory items.

Expenses.

Workday lets workers capture, approve, and submit expense reports on any device while lowering costs, increasing accounting accuracy, and enabling timely reimbursements. This includes pre-travel approval and advances.

Fund accounting.

At the heart of Workday Financial Management, fund accounting segregates resources into categories or funds, making it easier for you to identify the source of funds and track their usage across the application—from general ledger to payroll. Real-time reports help you demonstrate accountability and stewardship of funds, evaluate organizational and managerial performance on specific funds or a group of funds, and determine the financial condition of your institution to aid in planning efforts.

Results

- 70% reduction in time to close
- 50% reduction in external audit requests
- 59% reduction in ledger accounts
- 33% reduction in time to audit grants

Endowment accounting.

With its single system of record for managing your pooled endowment accounting, Workday Financial Management provides sophisticated workflows that process, record, and unitize endowment investment activity, eliminating cumbersome manual tasks. It enables unitized purchase, sale, transfer, adjustment, and payout transactions all centered on each endowment. It leverages the same object that is used for cost spending and payroll against the endowment, giving your organization a 360-degree view of its endowment activities.

Business assets.

While traditional fixed-asset systems handle the accounting of large, immobile assets, they were never designed to help colleges or universities manage the high-value, low-cost assets that so many of us rely on, such as laptops, cell phones, web conferencing accounts, security badges, and other “utility belt” items for today’s workers. Workday combines the traditionally separate domains of fixed assets and inventory with the ability to manage the items that might be small and inexpensive but still important to your institution.

Projects and capital projects.

Workday enables you to track, budget, and forecast spending for capital and other projects, and provides visibility through dashboards into key metrics, such as project status, duration, resource demand, and project budget versus actual. It enables you to aggregate capital project expenditures and convert the project into an asset.

Make data your most strategic asset.

Equip your managers and executives with the information they need to make sound decisions. With Workday, you can capture the details of every financial transaction to better serve and inform all teams, not just finance.

Real-time financial reporting.

To gather rich business intelligence, Workday captures business dimensions at the point of transaction and maintains them through transactional, management, and financial reporting. The in-memory architecture in Workday creates and updates accounting and financial reports in real time, eliminating batch processing and reducing time spent on reconciliation.

Financial reports can be run at any time to gain insight into the current state of your organization. Instant access to business-event data directly from the transactional system enables you to accurately calculate financial results. You can drill into detailed transactions for further analysis or to take related actions. Dashboards provide transparency into information as it is gathered, and scorecards use key metrics to surface rich insights.

Workday is delivered with always-on audit, with every click tracked down to the field level, ensuring accountability and transparency.

Every transaction is documented, creating undefeatable electronic evidence and enabling you to proactively manage risk and monitor compliance.

Cash flow control and automation.

The Workday settlement engine gives you oversight into all transactions: procurement, expenses, grants, finance, and payroll. It shows you real-time cash balances, helps you manage resources more effectively, and enables you to make better decisions about funding, paying, and collecting money. By understanding inflow and outflow, you can also more accurately forecast future cash flow.

Workday helps higher education institutions easily interoperate with financial institutions to bring in bank statement files and execute payments. It proactively monitors for changing file formats and delivery requirements to ensure payments and bank statements are sent and received properly.

Financial planning.

Workday expedites budget development by incorporating financial data into the planning process, eliminating the need for a separate budgeting solution or complex, manual spreadsheets.

Workday uses preexisting transactional and organizational structures to enable you to quickly and easily create and execute plans based on real-time data. Users can create, manage, and analyze different versions of budgets, scenarios, and forecasts through robust modeling capabilities.

Full view of the institution.

Higher education leaders rely on much more than financial, HR, and student data to make decisions. They need information from other places, such as their learning management and housing systems, to get a full picture of institutional trends. Workday makes it easy to get a current, reliable, and singular view of the business by bringing all that data together with integration and data management capabilities.

Ensure compliance and transparency.

Workday reimagines the traditional model of bolt-on governance, risk, and compliance systems that only marginally fulfill the various requirements of higher education. Built into the core of Workday, the business process framework is the cornerstone for internal control and governance. You can configure internal business processes to continuously capture and provide visibility into who took what action in the system. Workday is delivered with always-on audit, with every click tracked down to the field level, ensuring accountability and transparency.

Workday Financial Management handles every transaction, captures all required information, follows the configured approvals, and ensures that the accounting impact of every transaction is immediately auditable. Audit reports and dashboards are preconfigured to monitor activities and compliance and make it easy to view trends in real time, such as an increasing number of expenses without receipts. From these dashboards, you can drill down to take further action to rectify any areas of concern.

Benefit from upskilling and reskilling your team to do more valuable strategic tasks and projects instead of spending days sorting through piles of paper for the college or university. The flexibility of the platform makes it possible for institutions to solve problems with turnaround times that can be measured in hours instead of days or weeks.

Workday lets you plan, execute, and analyze in a single system, providing more consistency and greater visibility than with other systems.

When new accounting standards are required, Workday assesses their impact and provides the capabilities required to support and assist with adoption. This eliminates some of the work traditionally required to maintain adherence to changing GASB and GAAP standards.

Your institution can accommodate local regulations, increase process visibility, and reduce overall risk. Your business processes, audit trails, and security models are all natively built into Workday, eliminating the need for a separate bolt-on solution.
