

Workday for Mobile

In our continuously changing world, people need to stay up-to-date, and have quick access to information and the ability to complete critical tasks while on the go. Managers need to be able to supervise their people from anywhere, and executives require constant access to their key performance indicators that empower timely decision-making.

At Workday, we meet our users where they are. We design our native mobile applications to take advantage of the benefits of innovation in mobile technology.

Mobilize Your Workforce

Enable your workers to use their time more efficiently by providing core applications at their fingertips. Workers can check-in and checkout right from their mobile devices, and with geofencing, organizations can define the boundaries of their work sites. With Workday for mobile, workers can also view their pay information, submit requests for time off or expense reports, check on projects, submit their benefits enrollment, enter time spent on activities in real time, and much more.

Intuitive and Always Up-to-Date

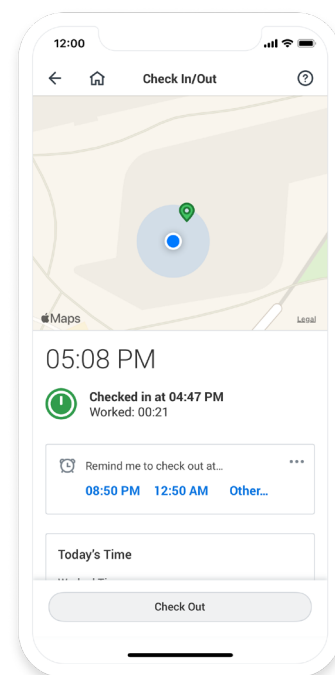

Designed specifically for your mobile device—using native mobile platform capabilities and natural human gestures—Workday for mobile is simple and intuitive. And since your data is stored in the cloud, the information you access is always up-to-date.

Insight and Action at Your Fingertips

We believe that mobile applications should offer more than just notifications. Workday for mobile allows you to keep up with your current work tasks, and provides the insight you need to make decisions quickly. Increase efficiency and response times when you are on the go by browsing dashboards and reports— independently or embedded as part of a work task.

Key Benefits

- Simple and intuitive
- Quick access to critical information keeps you up-to-date
- Access to current work tasks from anywhere
- The same look, feel, and security model as the rest of Workday
- Native mobile device technology such as biometric authentication to ensure secure access

Workers can check-in and checkout right from their mobile device, and with geofencing, organizations can define the boundaries of their work sites.

Manage More Effectively

You want to be able to manage and engage your employees even when you are not in front of a computer. Workday for mobile gives you access to valuable information about your team or individual employees from anywhere at any time. Review information on team compensation or performance management. Drill into individual details about each employee to stay up-to-date with your team members. And take quick action on tasks, such as approving expenses or time off.

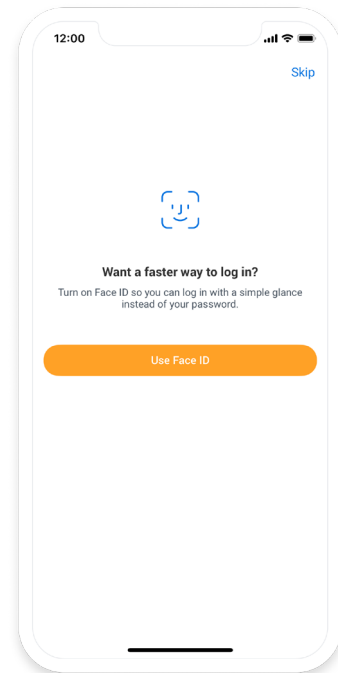

Simple and Secure

Deploying and managing Workday for mobile is easy and familiar, with a consistent look and feel as Workday for the web and mobile web. And because it uses the same security model as the rest of Workday, you can be confident that access to information in Workday is consistent. This approach enables a simpler security configuration and faster implementation.

Workday for mobile can also take advantage of native mobile device technology, such as biometric authentication (fingerprints/face recognition), to ensure secure access while maintaining a seamless user experience for your workers.

If your mobile device is ever lost or stolen, you can be confident that your data is secure because all information is protected by the Workday security model and stored in the cloud, not on your device.

You can find Workday in the Apple App Store or the Google Play App Store; when needed, you can also access Workday via your mobile browser.

Workday for mobile can also take advantage of native mobile device technology, such as biometric authentication.
