

Workday Orchestrate: Connect Your Enterprise. Define Your Future.

Your business doesn't run on just one system—it runs on a complex network of them. Workday Orchestrate provides a modern, unified approach to connection that helps you maximize the value of all your enterprise investments. It's the connective fabric for your enterprise, empowering you to build, orchestrate, and integrate processes and data across your entire technology landscape. With Workday Orchestrate, you don't just keep up—you define the pace of innovation.

Workday Orchestrate is critical to every step of your journey with Workday, from implementation to creating new user experiences. It empowers a new mindset around integrations, expanding the reach beyond traditional developers to give business experts the power to build connections, while still providing the capabilities a seasoned developer requires. This approach allows your entire team to craft innovative solutions and accelerate development like never before.

Workday Orchestrate is the connective fabric for your enterprise. It shatters the rigid walls between silos, giving you the power to seamlessly build, integrate, and automate across every part of your Workday ecosystem—including Workday Extend, Business Processes, and APIs—and all your other systems.

Key Benefits

- **Accelerate Development:**
Rapidly scale your developer resources to design, build, and manage integrations and workflows.
- **Connect Your Entire Business:**
Unify Workday with your entire enterprise ecosystem with end-to-end process automation.
- **Scale with Confidence:**
Built to handle high volumes and complex integrations, ensuring your integrations run smoothly as business demands evolve.
- **Join a Thriving Community:**
Access a thriving ecosystem of developers and partners for new ideas and support.

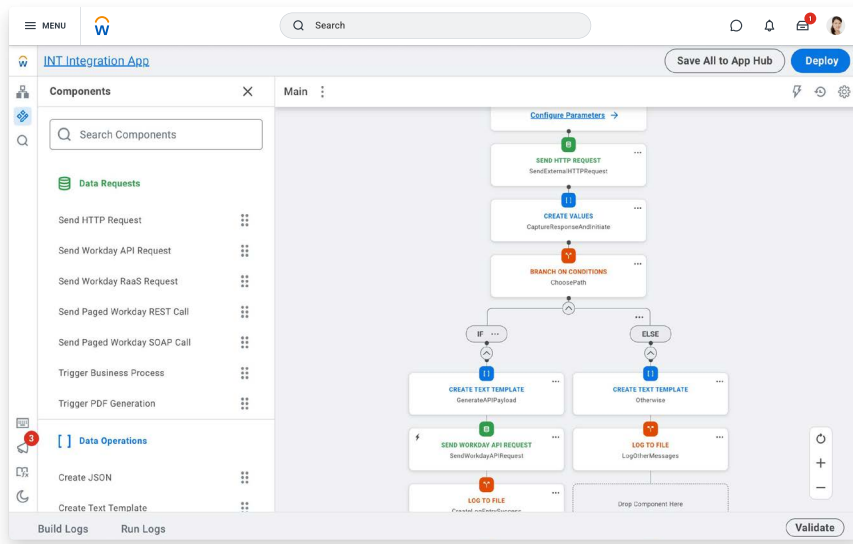

Connect with confidence.

Because Workday Orchestrate is a native part of the Workday ecosystem, you can be confident that your existing security controls and audit policies are automatically enforced, ensuring adherence to governance without extra configuration. It's purpose-built to integrate with Workday, providing a level of depth and efficiency that generic tools can't match. This inherent understanding of the core services of Workday—including Workday Extend, business processes, APIs, and security—is built into the core of Workday Orchestrate, which builds on this foundation to enable a seamless connection to your entire enterprise.

Your ideas, accelerated by low-code.

Accelerate your development and simplify complex integrations with the intuitive low-code visual builder in Workday Orchestrate. It does the heavy lifting for you, abstracting away intricate coding details that would traditionally be managed manually. The intuitive drag-and-drop interface, combined with a rich library of pre-built components, templates, and functions, allows you to design and support complex workflows with conditional logic, loops, and branching.

The low-code data transformation capabilities are a significant advantage, enabling you to easily join and merge data from various formats like JSON, XML, and CSV. Advanced users can use a powerful expression builder and content assistance to craft highly customized integration processes with precision, ensuring you can rapidly bring even the most innovative use cases to life.

The Workday Orchestrate visual builder: build and manage workflows, all from your web browser.

Scale for today and tomorrow.

Workday Orchestrate offers unmatched flexibility, designed for your organization's most demanding real-time integrations and efficient batch processing. It supports a variety of advanced patterns, from high-frequency, event-driven scenarios to high-volume, batched file processing. For example, Workday Orchestrate can instantly respond to specific changes in Workday—like a new hire or a budget approval—and kick off a predefined sequence of actions in other connected systems, ensuring proactive automation that keeps your entire ecosystem synchronized.

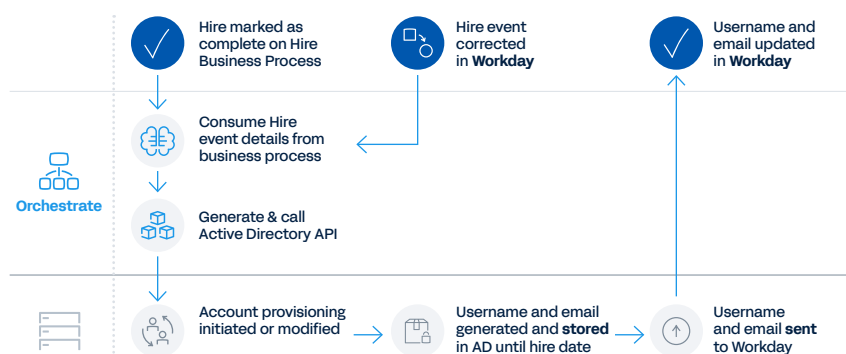

Workday Orchestrate also processes large volumes of data, such as consuming or producing full files of data from a batched pattern approach. It abstracts complex problems, allowing you to solve for volume and memory consumption without needing a high level of technical expertise. With Workday Orchestrate, any workflow can be created and triggered from a Workday Extend app, business process, integration system, or external system—whether it's an event-based trigger, an API trigger, or a time-based schedule.

Monitor and manage with ease.

After an integration is deployed, Workday Orchestrate excels in monitoring and managing your critical integrations and automations. Comprehensive monitoring provides real-time visibility into every workflow. And because it's purpose-built to integrate with Workday, you'll have access to detailed, tenant-specific health and performance information. This visibility provides immediate insights into integration status, performance metrics, and detailed logs, empowering your teams to proactively identify, troubleshoot, and resolve any issues quickly.

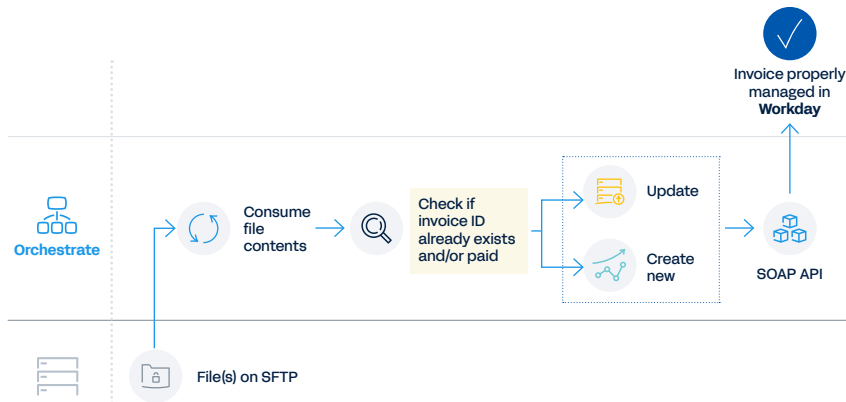

Workday Orchestrate in action.

Real-time trigger integration: Workday to active directory.

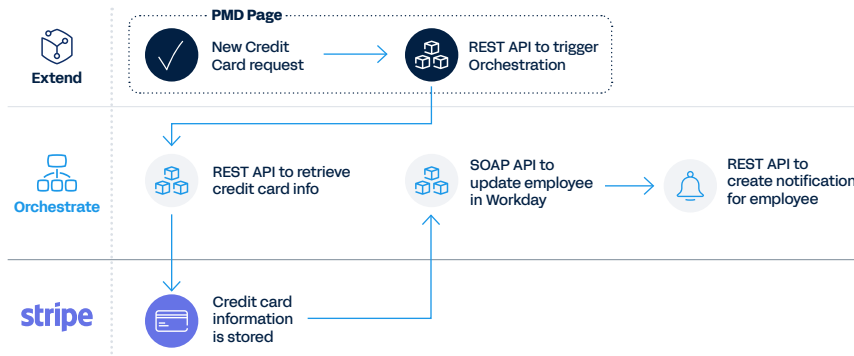

Workday Orchestrate is transforming the way HR and IT work together. Initiated by the Workday "Hire" business process, it instantly calls for new user accounts in Active Directory. Unlike traditional integrations, it proactively listens for any subsequent corrections to the hire data, which are also processed in real time. The result is a seamless and accurate onboarding process that prevents friction and keeps your entire ecosystem perfectly in sync.

Batch integration: Inbound file-based invoice processing.

Workday Orchestrate automates the secure processing of inbound files. Unlike traditional methods that require manual coding to generate logic, it does the heavy lifting for you. It pulls supplier invoices from an SFTP server and transforms the external data for processing in Workday. Once processed, the information can be routed for necessary approvals or used for subsequent operations. This advanced, automated process eliminates manual effort, reduces errors, and dramatically accelerates your most critical financial operations.

End-to-End Automation: Pairing Workday Extend with Orchestrate

Workday Orchestrate is purpose-built to work with the core services of Workday. In this example, a request in a Workday Extend app triggers a workflow. Workday Orchestrate automatically retrieves real-time credit card information from Stripe, then updates records in Workday and sends an immediate notification to the employee. This is more than just automation; it's an end-to-end orchestration that eliminates manual handoffs, ensures real-time accuracy across different systems, and delivers an effortless experience. What was once a cumbersome task is now a streamlined workflow.
